Protective Packaging Properties:

Corrosion Prevention

Anti-Static

Fire Resistant

UV Protection

High Impact and Puncture Resistant

Quality Protective Packaging for Industrial Products

Hitech Films is a one-stop manufacturer of VCI / PE films for Automotive, Electronics, Paper, Consumer, Fireworks and a host of other industrial packaging applications.

RUST, FIRE, STATIC ELECTRICITY AND TRANSIT IMPACT... can damage your products, while stored on-the-shelf, shop-floor and while in transit. Hitech's range of VCI (Volatile Corrosion Inhibitor) Films and PE (Polyethylene) Films have blended properties to give absolute protection to safeguard your products from Air, Moisture, Dust and Transit-Impact. In addition, we offer machines which can automate packaging tasks and accessories that add a protective shield for your products. This is seamlessly complemented by our VCI Films/PE films.

When metal components / products are wrapped with VCI films the vapour acts on the environment and create a secure molecular surface over the metal to prevent corrosion.

Supplier of Automated Packaging Machines manufactured by **MINI PACK**

Carton Stretch Wrapping Machine

Banding & Spiral Wrapping Machine

Automatic Shrink Wrapping Machine

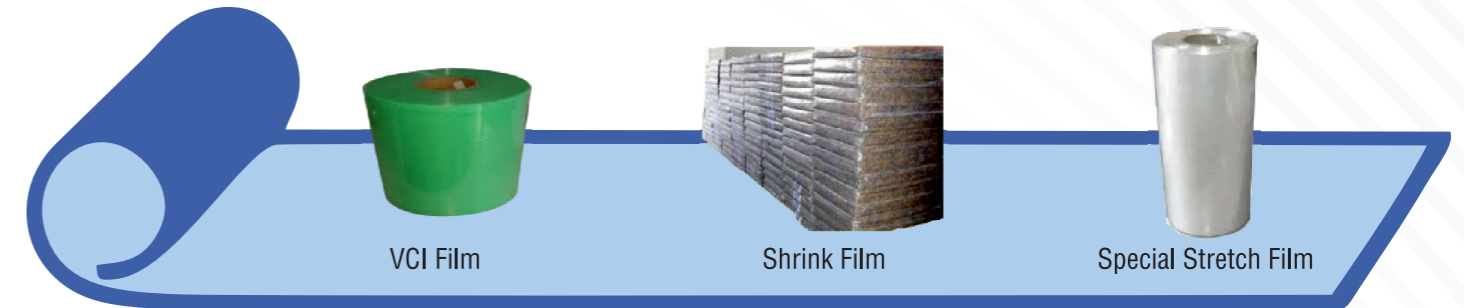

Flame Proof Shrink Tunnel

Products

Range of Protective Wraps

The products currently produced are:

VCI Film
